

RealtouchHR

Employees Module - Production-Ready Feature Specification

Developer / Codex Audit, Gap Analysis and Implementation Prompt

Prepared for RealtouchHR implementation, QA and production readiness

Document Area	Purpose
Feature specification	Defines all required employee module features, fields, workflows and integrations.
Developer audit checklist	Helps the developer/Codex confirm what already exists, what is partial and what is missing.
Implementation plan	Provides phased build instructions for production-ready completion.
Testing and acceptance criteria	Defines how to verify that the module works correctly before release.
Comprehensive Codex prompt	A copy-paste prompt to audit, implement, test and harden the module.

Important production principle: The Employees module must become the single source of truth for HR, payroll, HMRC RTI readiness, right-to-work, UKVI compliance, documents, leave, scheduling, performance, training, self-service and audit logs.

1. Executive Summary

The current Employees page shows the correct starting structure: a sidebar module, a searchable employees area, and an Add Employee action. To make this production-ready, the module must move beyond storing names and contact details. It should hold complete employee lifecycle data and feed every dependent module, including Payroll, HMRC RTI, RTI Sync, UKVI Compliance, Documents, Leave, Scheduling, Time Tracking, Statutory Pay, Year-End, Self-Service, Audit Log and AI Copilot.

Production Outcome	Requirement
Single source of truth	All employee-related HR, payroll, compliance and lifecycle data should be stored or referenced from this module.
RTI readiness	Every employee should show whether they are ready for FPS/RTI submissions and list any missing fields.
Payroll readiness	Payroll must not include an employee unless required pay, tax, NI and bank/payment details are complete or explicitly exempt.
UKVI readiness	Sponsored workers and time-limited right-to-work employees must have expiry tracking, follow-up checks and mismatch alerts.
Security and audit	Sensitive changes must be permission-controlled, encrypted where appropriate and fully audit-logged.
Production QA	The module must be tested with happy paths, edge cases, validation errors, permissions and integrations.

2. Employee List and Dashboard

Feature	Required Production Behaviour
Search	Search by full name, preferred name, employee ID, work email, personal email, job title, department, location, NI number, payroll status, visa status and sponsored worker status.
Filters	Active, onboarding, draft, suspended, leaver, archived, department, location, contract type, employment type, payroll-ready, RTI-ready, right-to-work status, UKVI status and missing documents.
Sorting	Sort by name, start date, department, job title, employment status, payroll status, RTI status, visa expiry date and last updated date.
Status badges	Display HR status, payroll readiness, RTI readiness, right-to-work status, UKVI status and document completion status.
Bulk actions	Export, archive, invite to self-service, assign department/location, import update, generate missing fields report and send onboarding reminders.
Quick actions	View profile, edit, upload document, run readiness check, mark as leaver, invite employee, view audit trail.

3. Add Employee Workflow

Feature	Required Production Behaviour
Step-by-step wizard	Use tabs or a wizard: Personal Details, Contact Details, Employment, Payroll & Tax, Bank, Right to Work / UKVI, Emergency Contact, Documents, Self-Service, Review & Save.
Draft save	Allow saving as draft if not all fields are complete.

Validation	Show missing critical fields by category: HR, payroll, RTI, right-to-work and UKVI.
Duplicate detection	Warn if same name/date of birth/email/NI number already exists.
Onboarding status	New employees should start as Draft or Onboarding until all mandatory checks are complete.

4. Employee Profile Structure

Feature	Required Production Behaviour
Profile header	Photo, name, job title, department, line manager, status, start date, payroll-ready, RTI-ready, RTW status and UKVI status.
Overview tab	Summarise personal, job, payroll, compliance, leave and document status with next actions.
Detailed tabs	Personal, Contact, Employment, Payroll, Bank, Right to Work / UKVI, Documents, Leave, Time & Attendance, Performance, Training, Notes, Audit Trail.
Next action panel	Display highest-priority actions such as missing contract, missing NI number, visa expiring, RTI not ready, probation due or bank details incomplete.

5. Required Employee Data Fields

Personal Details

- Employee ID (auto/manual)
- Title
- First name
- Middle name
- Last name
- Preferred name
- Date of birth
- Gender/configurable identity field if required for payroll/RTI
- National Insurance number or unavailable marker
- Nationality
- Profile photo
- Employee lifecycle status

Contact Details

- Personal email
- Work email
- Mobile number
- Alternative phone
- Address line 1
- Address line 2
- Town/city
- County
- Postcode

- Country
- Address effective date
- Proof of address upload optional

Employment Details

- Job title
- Department
- Work location
- Line manager
- Employment type
- Contract type
- Start date
- Probation period
- Probation end date
- Working pattern
- Weekly contracted hours
- Notice period
- End date for leavers
- Reason for leaving

Payroll and Tax

- Payroll status
- Pay frequency
- Salary type
- Annual salary/hourly rate/daily rate
- Standard weekly hours
- Tax code
- NI category
- Student loan plan
- Postgraduate loan
- Pension status
- Auto-enrolment status
- Payroll start date
- Starter declaration
- Director payroll marker where applicable

Bank Details

- Account holder name
- Bank name
- Sort code
- Account number
- Building society roll number
- Payment reference
- Payment method
- Masked display
- Encrypted storage and permission-controlled view

Right to Work

- Right to work status
- Check type
- Check date
- Checked by
- Document type
- Document upload
- Share code where applicable
- Right to work expiry date if time-limited
- Follow-up check required
- Follow-up check date
- Verification notes

Sponsored Worker / UKVI

- Sponsored worker yes/no
- CoS number
- SOC code
- Job title on CoS
- Work location on CoS
- Salary on CoS
- Weekly hours on CoS
- Visa start date
- Visa expiry date
- Sponsorship start date
- Sponsorship end date
- Reporting duties status
- UKVI monitoring status

Emergency Contacts

- Contact name
- Relationship
- Primary phone
- Alternative phone
- Email
- Address
- Primary emergency contact flag

Documents

- Document category
- Document title
- File upload
- Issue date
- Expiry date
- Visibility level
- Uploaded by
- Version history
- Employee acknowledgement where relevant

Training and Performance

- Training name
- Training category
- Completion date
- Expiry date
- Certificate upload
- Review type
- Review date
- Reviewer
- Goals
- Outcome
- Improvement plan where required

6. Readiness Logic and Blocking Rules

The module should calculate readiness flags automatically and should not rely on manual status labels only.

Readiness Type	Must be TRUE only when these are complete
HR Profile Ready	Personal details, contact details, employment details, emergency contact and required HR documents are complete.
Payroll Ready	Payroll status, pay frequency, salary/rate, standard hours, tax code, NI category, starter declaration, payment method and bank details are complete or deliberately exempt.
RTI Ready	Employee has all data required for FPS reporting, including name, date of birth, address, NI number or unavailable marker, tax code, NI category, start date, pay frequency and current payroll values.
Right to Work Ready	Right-to-work check is completed, evidence uploaded, expiry/follow-up dates recorded where time-limited and verified by an authorised user.
UKVI Ready	Sponsored worker fields match the CoS, right-to-work is valid, salary/hours/location/job role are consistent, and no required monitoring record is missing.
Documents Ready	All mandatory document categories for that employee type have been uploaded, reviewed and not expired.

Blocking Rule	Expected Behaviour
Cannot mark Payroll Ready with missing payroll fields	Show exact missing fields and prevent status change.
Cannot mark RTI Ready with missing FPS data	Show exact missing RTI fields and link to the tab where they should be corrected.
Cannot include employee in pay run unless Payroll Ready	Allow override only for authorised users with reason logged.
Cannot prepare live FPS with employee RTI gaps	Block submission or exclude employee only with explicit authorised decision and audit log.
Cannot mark sponsored worker UKVI Ready with mismatched CoS data	Show mismatched salary, hours, job title, SOC or location.
Cannot delete sensitive records without archive trail	Use archive/soft delete and retain audit log.

7. Integration Requirements Across RealtouchHR

Connected Module	Employee Module Must Provide
------------------	------------------------------

Dashboard	Headcount, onboarding count, missing documents, expiring visas, probation alerts, payroll gaps and RTI gaps.
Payroll	Salary/rate, hours, tax code, NI category, pension status, bank/payment details, pay frequency, starter/leaver data.
HMRC RTI	Employee data required for FPS/EPS and readiness status before submission.
RTI Sync	Approved payroll employees, validation results, FPS status and RTI error feedback into employee profile.
UKVI Compliance	Right-to-work status, visa dates, CoS details, sponsored worker monitoring, salary/hours/location mismatch alerts.
Leave	Entitlements, absence history, sick leave, unauthorised absence, statutory leave and sponsored worker monitoring triggers.
Scheduling	Working pattern, assigned shifts, location, contracted hours and manager.
Time Tracking	Clock-in/out records, timesheets, overtime, missed shifts and payroll-approved hours.
Documents	Employee folder, document category, expiry alerts, signed policies and evidence packs.
Statutory Pay	Eligibility data, absence periods and payroll linkage.
Year-End	P60/P45 data, leaver status and final payroll information.
Self-Service	Employee visible information, change requests, payslips, leave requests and shared documents.
Audit Log	All critical employee record changes, sensitive data access and readiness overrides.
AI Copilot	Profile summary, missing field analysis, compliance readiness checks and generated HR letters.

8. Security, Permissions and Audit Requirements

Area	Production Requirement
Role-based access control	Define Super Admin, HR Admin, Payroll Admin, Manager, Employee, Auditor and External Consultant permissions.
Sensitive fields	Salary, bank details, NI number, right-to-work evidence, visa documents, medical/sickness notes and disciplinary notes must be protected.
Bank details	Encrypt at rest, mask by default, log every view and edit.
Documents	Apply visibility levels: admin-only, payroll-only, employee-visible, manager-visible and auditor-read-only.
Audit trail	Record user, timestamp, action, old value, new value, IP/device where available and reason for sensitive changes.
Soft delete/archive	Do not permanently delete employee records from normal UI. Use archive with retention and audit record.
Data export	Restrict and log all exports, especially employee master data and payroll/bank reports.
Self-service changes	Sensitive changes should be submitted as requests and approved by HR/payroll before applying.

9. Alerts, Reports and Notifications

HR Alerts

- Missing contract

- Missing emergency contact
- Probation ending soon
- Incomplete onboarding
- Employee has no manager
- Mandatory training overdue

Payroll Alerts

- Missing tax code
- Missing NI category
- Missing salary/hourly rate
- Missing bank details
- Starter declaration missing
- Employee excluded from payroll unexpectedly

RTI Alerts

- Missing RTI-required fields
- Employee details changed after FPS prepared
- Leaver not reported
- FPS rejected for employee-level error
- Last FPS status pending/rejected

Right to Work / UKVI Alerts

- Right-to-work check due
- Visa expires in 90/60/30 days
- Follow-up RTW check overdue
- CoS salary differs from payroll salary
- CoS job title or location differs from employee record
- Sponsored worker unauthorised absence concern

Document Alerts

- Document missing
- Document expired
- Document expiring soon
- Document uploaded but not reviewed
- Policy not acknowledged

10. Phased Implementation Plan

Phase	Scope	Acceptance Output
Phase 1 - Audit current module	Inspect current codebase, database, routes, UI components, API endpoints and tests. Mark each feature as Exists, Partial or Missing.	Gap analysis report and implementation backlog.
Phase 2 - Core employee record	Employee list, add/edit/archive, profile page, personal/contact/employment/emergency details, search/filter/sort.	Core employee lifecycle works end to end.
Phase 3 - Documents and audit	Document upload/categories/expiry, audit trail, status history, permissions	Employee evidence pack and audit logs work.

	for sensitive tabs.	
Phase 4 - Payroll and RTI readiness	Payroll tab, tax fields, bank fields, payroll-ready and RTI-ready engines, missing-field blocking rules.	Employees correctly feed payroll and RTI validation.
Phase 5 - Right to Work and UKVI	RTW check fields, sponsored worker tab, CoS details, visa expiry and mismatch alerts.	UKVI compliance profile and alerts work.
Phase 6 - Self-service and workflows	Onboarding, offboarding, employee change requests, self-service invitations.	Employee/HR workflows operate securely.
Phase 7 - Production hardening	Integration tests, permission tests, audit tests, import/export tests, seeded demo data, error handling and deployment checks.	Production-ready module with test evidence.

11. QA and Acceptance Test Checklist

Test	Expected Result
Create employee as draft	Employee saves with incomplete fields and status Draft/Onboarding.
Complete HR profile	HR Profile Ready changes to Yes only after all required HR fields are complete.
Payroll readiness block	System blocks Payroll Ready when tax code, NI category, salary or bank/payment details are missing.
RTI readiness block	System lists exact missing RTI fields and prevents RTI Ready until corrected.
Right-to-work workflow	RTW evidence upload, check date, expiry and follow-up reminders work.
Sponsored worker mismatch	Salary/hours/location/job title mismatch between CoS and actual record triggers warning.
Document expiry	Expired/soon-to-expire documents appear on profile and dashboard.
Bank details security	Bank details are masked by default, permission restricted and access is logged.
Self-service change request	Employee submits change request; HR approves before sensitive changes apply.
Employee included in pay run	Only Payroll Ready employees are included, unless override is permissioned and logged.
RTI integration	Employee-level FPS validation uses employee record and returns errors clearly.
Archive employee	Employee is archived not hard deleted, no data is lost, audit log is retained.
Import employees	CSV/XLSX import validates data, detects duplicates, previews errors and logs batch history.
Export reports	Exports are permissioned and logged.
Role permissions	Manager sees only assigned team; employee sees only own profile; payroll admin sees payroll tabs only as permitted.
Audit trail	Critical changes show before/after values, user and timestamp.
UI responsiveness	Employee module works on desktop, tablet and mobile widths without broken layout.
Error handling	API failures, upload failures and validation failures show clear user-friendly messages.

12. Suggested Data Model / Database Entities

- employees
- employee_contacts
- employee_employment_details
- employee_payroll_details
- employee_bank_details
- employee_right_to_work
- employee_sponsorship_details
- employee_emergency_contacts
- employee_documents
- employee_leave_entitlements
- employee_training_records
- employee_performance_reviews
- employee_notes
- employee_status_history
- employee_audit_logs
- employee_import_batches
- employee_change_requests
- employee_readiness_checks
- employee_permissions_overrides

API Area	Example Endpoints
Employees	GET /employees, POST /employees, GET /employees/:id, PATCH /employees/:id, POST /employees/:id/archive
Readiness	GET /employees/:id/readiness, POST /employees/:id/readiness/recalculate
Payroll details	GET/PATCH /employees/:id/payroll, GET/PATCH /employees/:id/bank-details
RTW/UKVI	GET/PATCH /employees/:id/right-to-work, GET/PATCH /employees/:id/sponsorship
Documents	POST /employees/:id/documents, GET /employees/:id/documents, PATCH /documents/:id, DELETE/ARCHIVE /documents/:id
Audit	GET /employees/:id/audit-log
Import/export	POST /employees/import, GET /employees/export, GET /employees/reports/missing-fields

13. Comprehensive Developer / Codex Prompt

Copy and paste the following prompt into Codex or send it to the developer. It is written to first audit what exists, then implement missing or partial features, then test and harden the module for production.

- You are working on the RealtouchHR application. I need you to audit, complete, test and production-harden the Employees module.
- Current UI context:
- The Employees page exists with a sidebar, Search employees input, and Add Employee button.
 - The module must become the central HR record for the entire platform.
 - It must integrate with Payroll, HMRC RTI, RTI Sync, UKVI Compliance, Documents, Leave, Scheduling, Time Tracking, Statutory Pay, Year-End, Self-Service, Audit Log and AI Copilot.

Main instruction:

1. First inspect the current codebase and database/schema.
2. Produce a gap analysis in the response using this status for each feature: EXISTS, PARTIAL, MISSING, or BROKEN.
3. Do not remove existing working functionality.
4. Implement all missing and partial features required below.
5. Add validation, permissions, audit logging and tests.
6. Ensure the module is production-ready and fully integrated with existing architecture.
7. After implementation, provide a clear summary of files changed, database migrations, tests added, how to run them, and any environment variables required.

Required Employees module pages/components:

- Employee list page with search, filters, sorting, status badges and quick actions.
- Add employee workflow using tabs/wizard: Personal, Contact, Employment, Payroll & Tax, Bank, Right to Work / UKVI, Emergency Contact, Documents, Self-Service, Review & Save.
- Employee profile page with header summary and tabs.
- Edit employee page or editable profile sections.
- Employee documents tab.
- Payroll and tax tab.
- Bank details tab with strict access control.
- Right to Work / UKVI tab.
- Leave and absence summary tab.
- Scheduling/time tracking summary tab.
- Performance and training tab.
- Notes tab.
- Audit trail tab.

Required employee list features:

- Search by name, employee ID, email, job title, department, location, NI number, payroll status, RTI status, visa status and sponsored worker status.
- Filter by active, onboarding, draft, suspended, leaver, archived, department, location, contract type, employment type, payroll-ready, RTI-ready, right-to-work status, UKVI status and missing documents.
- Sort by name, start date, department, job title, employment status, payroll status, RTI status, visa expiry date and updated date.
- Display badges for lifecycle status, payroll-ready, RTI-ready, right-to-work, UKVI and document completion.
- Quick actions: view profile, edit, upload document, run readiness check, mark as leaver, invite employee, view audit trail.
- Bulk actions: export, archive, invite to self-service, assign department/location, generate missing-fields report.

Required employee lifecycle statuses:

- Draft
- Onboarding
- Active
- On Leave
- Suspended
- Notice Period
- Leaver
- Archived

Required data sections and fields:

Personal Details:

- Employee ID auto-generated or manual
- Title
- First name
- Middle name
- Last name
- Preferred name
- Date of birth
- Gender/configurable identity field where needed for payroll/RTI
- National Insurance number or unavailable marker
- Nationality
- Profile photo
- Lifecycle status

Contact Details:

- Personal email
- Work email
- Mobile number
- Alternative phone
- Address line 1
- Address line 2
- Town/city
- County
- Postcode
- Country
- Address effective date
- Proof of address upload optional

Employment Details:

- Job title
- Department
- Work location
- Line manager
- Employment type
- Contract type
- Start date
- Probation period
- Probation end date auto-calculated
- Working pattern
- Weekly contracted hours
- Notice period
- End date for leavers
- Reason for leaving

Payroll and Tax Details:

- Payroll status
- Pay frequency
- Salary type
- Annual salary/hourly rate/daily rate

- Standard weekly hours
- Tax code
- NI category
- Student loan plan
- Postgraduate loan
- Pension status
- Auto-enrolment status
- Payroll start date
- Starter declaration
- Director payroll marker where applicable

Bank Details:

- Account holder name
- Bank name
- Sort code
- Account number
- Building society roll number
- Payment reference
- Payment method
- Mask bank details by default
- Encrypt sensitive bank fields at rest if not already handled by platform-level encryption
- Log every view and change to bank details

Right to Work:

- Right to work status
- Check type
- Check date
- Checked by
- Document type
- Document upload
- Share code where applicable
- Right to work expiry date if time-limited
- Follow-up check required
- Follow-up check date
- Verification notes

Sponsored Worker / UKVI:

- Sponsored worker yes/no
- Certificate of Sponsorship number
- SOC code
- Job title on CoS
- Work location on CoS
- Salary on CoS
- Weekly hours on CoS
- Visa start date
- Visa expiry date
- Sponsorship start date
- Sponsorship end date

- Reporting duties status
- UKVI monitoring status

Emergency Contacts:

- Contact name
- Relationship
- Primary phone
- Alternative phone
- Email
- Address
- Primary emergency contact flag
- Support more than one emergency contact

Documents:

- Contract of employment
- Offer letter
- Job description
- Right to work evidence
- Passport/ID
- Visa/BRP/eVisa evidence
- Proof of address
- Qualifications
- Certificates
- DBS check
- References
- Payroll documents
- Pension documents
- Disciplinary records
- Performance reviews
- Training certificates
- Signed policies
- Leaver documents
- Other documents
- Each document should support category, issue date, expiry date, visibility level, upload user, review status and version history.

Training and Performance:

- Training records with course name, category, completion date, expiry date and certificate upload.
- Performance reviews with review type, review date, reviewer, goals, outcome, notes and improvement plan where required.

Readiness logic:

Implement automatic readiness calculations. Do not rely only on manually selected labels.

- HR Profile Ready
- Payroll Ready
- RTI Ready
- Right to Work Ready
- UKVI Ready / Not Applicable
- Documents Ready

Blocking rules:

- Do not allow Payroll Ready if payroll fields are incomplete.
- Do not allow RTI Ready if FPS/RTI-required employee fields are incomplete.
- Do not include employee in normal pay run unless Payroll Ready, except with authorised override and audit reason.
- Do not prepare live FPS for an employee with RTI gaps unless excluded or overridden by an authorised user with audit reason.
- Do not mark sponsored worker as UKVI Ready if CoS salary, hours, job title, SOC code or work location conflicts with the employee record.
- Do not hard delete employees from normal UI; archive/soft delete only.

Alerts required:

HR alerts:

- Missing contract
- Missing emergency contact
- Probation ending soon
- Incomplete onboarding
- Employee has no manager
- Mandatory training overdue

Payroll alerts:

- Missing tax code
- Missing NI category
- Missing salary/hourly rate
- Missing bank details/payment details
- Starter declaration missing
- Employee unexpectedly excluded from payroll

RTI alerts:

- Missing RTI-required fields
- Employee details changed after FPS prepared
- Leaver not reported
- FPS rejected for employee-level error
- Last FPS status pending/rejected

Right to Work / UKVI alerts:

- Right-to-work check due
- Visa expires in 90/60/30 days
- Follow-up right-to-work check overdue
- CoS salary differs from payroll salary
- CoS job title, SOC code, hours or work location differs from employee record
- Sponsored worker unauthorised absence concern

Document alerts:

- Document missing
- Document expired
- Document expiring soon
- Document uploaded but not reviewed
- Policy not acknowledged

Permissions and security:

- Implement role-based access controls for Super Admin, HR Admin, Payroll Admin, Line Manager, Employee, Auditor and External Consultant if these roles exist; if not, add a scalable permission design compatible with current app architecture.
- Restrict salary, bank details, NI number, right-to-work evidence, visa documents, medical/sickness notes, disciplinary notes and private HR notes.
- Mask bank details by default.
- Log all views and changes of sensitive information.
- Restrict and log exports.
- Employees should only see their own self-service profile and documents made visible to them.
- Managers should only see assigned team members and only permitted sections.

Audit logging:

Log at minimum:

- Employee created
- Employee edited
- Payroll details changed
- Salary changed
- Bank details viewed
- Bank details changed
- NI number changed
- Right to work document uploaded
- Visa expiry date changed
- Sponsored worker details changed
- Job title changed
- Work location changed
- Contract uploaded
- Document deleted/archived
- Employee archived/restored
- Leaver processed
- Self-service invitation sent
- Readiness override used
- Export generated

Each audit entry should include:

- User
- Date/time
- Action
- Entity/record ID
- Before value where appropriate
- After value where appropriate
- Reason/comment for sensitive overrides
- IP/device if available

Integration requirements:

- Dashboard should receive headcount, onboarding count, missing documents, expiring visas, probation alerts, payroll gaps and RTI gaps.
- Payroll should receive salary/rate, hours, tax code, NI category, pension status, bank/payment details, pay frequency, starter/leaver data.

- HMRC RTI and RTI Sync should receive employee data needed for FPS validation and should return employee-level validation errors into the employee profile.
- UKVI Compliance should receive right-to-work status, visa dates, CoS details, sponsored worker monitoring and mismatch alerts.
- Leave should connect annual leave, sick leave, statutory leave and unauthorised absence to the employee record.
- Scheduling and Time Tracking should connect shifts, working pattern, contracted hours, location and approved hours.
- Documents should maintain employee evidence packs and document expiry reminders.
- Year-End should connect P60/P45 and leaver records.
- Self-Service should allow employee profile viewing, change requests, payslips, leave requests and visible documents.
- AI Copilot should be able to summarise employee profile, identify missing fields, check payroll readiness, check RTI readiness, check UKVI readiness and generate HR letters.

Import/export:

- Provide employee import template for CSV/XLSX.
- Import should preview records, validate missing fields, detect duplicates, map columns and show row-level errors.
- Save import history.
- Exports should include employee list, payroll-ready employees, RTI missing fields, sponsored workers, right-to-work expiry report, document expiry report and employee master file.
- Exports must be permission-controlled and audit-logged.

Testing requirements:

Add or update tests for:

- Creating draft employee
- Creating active employee
- Duplicate detection
- Field validation
- Payroll readiness calculation
- RTI readiness calculation
- Right-to-work expiry alert
- Sponsored worker mismatch alert
- Document upload and expiry
- Bank details masking and permission checks
- Sensitive data audit logging
- Employee archive/restore
- Import validation errors
- Export permission checks
- Role-based access checks
- Integration with payroll and RTI readiness
- UI loading, empty state and error states

Acceptance criteria:

- All existing tests pass.
- New tests for Employees module pass.
- No TypeScript/lint/build errors.
- Employee list loads with empty state, populated state and error state.
- Add Employee can create draft and complete records.
- Employee profile displays all required tabs and readiness statuses.
- Payroll Ready and RTI Ready cannot be falsely set when fields are missing.
- Sensitive fields are masked/restricted and audit-logged.

- Documents and expiry alerts work.
- Sponsored worker/UKVI mismatch checks work.
- Import/export works with validation and audit logs.
- Module is responsive and matches the current RealtouchHR UI style: clean white background, purple gradient primary actions, card-based sections, clear badges and compliance alerts.

Before finishing, provide:

1. Gap analysis table: feature, current status, action taken.
2. Files changed.
3. Database migrations added.
4. Tests added.
5. Commands to run build/test/lint.
6. Any setup or environment variables required.
7. Remaining risks or items requiring product-owner decision.

14. Final Developer Handover Checklist

- Run the Codex/developer prompt against the current codebase.
- Receive a gap analysis showing Exists / Partial / Missing / Broken.
- Approve phased implementation order if the changes are large.
- Confirm database migrations and seed/test data before deployment.
- Run lint, typecheck, unit tests, integration tests and production build.
- Perform manual QA using draft employee, complete employee, payroll-ready employee, RTI-ready employee, sponsored worker, leaver and archived employee scenarios.
- Confirm no employee can be wrongly marked Payroll Ready, RTI Ready or UKVI Ready.
- Confirm all sensitive data access is permission-controlled and logged.
- Confirm the UI matches the current RealtouchHR design language.
- Only deploy to production after all acceptance tests pass.
