## UKVI Compliance Scan Premium Feature

Production-Ready Feature Specification, Audit Checklist and Codex/Developer Prompt

|              |                                                                                                                                                                    |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Prepared for | RealtouchHR                                                                                                                                                        |
| Purpose      | Confirm whether the UKVI compliance scan exists, then implement a premium full-company sponsor compliance scan with preview, downloadable report and alert system. |
| Version      | 1.0                                                                                                                                                                |
| Date         | 08 June 2026                                                                                                                                                       |

**Developer instruction: audit first, then implement only what is missing, test thoroughly, and make the feature production-ready before release.**

## 1. Executive Summary

This document defines a premium UKVI Compliance Scan feature for RealtouchHR. The feature must scan the whole company, its sponsored workers, HR records, documents, right-to-work checks, reporting obligations, payroll/job alignment and internal audit evidence. It must then produce a compliance score, flag gaps through alerts, allow the user to preview the report inside the app, and optionally download the report in PDF and Word formats.

The feature must first check whether any part of this functionality already exists in the current codebase. The developer or Codex must audit existing pages, components, APIs, database models, background jobs, permission gates and report generation logic before implementing missing functionality.

## 2. GOV.UK Compliance Basis to Build Around

The compliance scan should be configurable and must not claim to replace legal advice. It should be aligned with current UK sponsor guidance, including sponsor duties, record-keeping duties, reporting duties and worker sponsorship requirements. The application should store source references and version dates so the compliance checklist can be updated when UKVI guidance changes.

| Area                          | Use in RealtouchHR                                                                                                                         | Official source                                                                                                                                                                                                                                                                                     |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sponsor duties and compliance | Workers and Temporary Workers: guidance for sponsors - Part 3. It explains sponsor duties and action UKVI may take if duties are breached. | <a href="https://www.gov.uk/government/publications/workers-and-temporary-workers-guidance-for-sponsors-part-3-sponsor-duties-and-compliance">https://www.gov.uk/government/publications/workers-and-temporary-workers-guidance-for-sponsors-part-3-sponsor-duties-and-compliance</a>               |
| Record-keeping duties         | Appendix D explains documents Worker and Temporary Worker sponsors must keep to meet sponsorship record-keeping duties.                    | <a href="https://www.gov.uk/government/publications/keep-records-for-sponsorship-appendix-d">https://www.gov.uk/government/publications/keep-records-for-sponsorship-appendix-d</a>                                                                                                                 |
| Sponsor a worker              | Part 2 covers sponsoring Worker and Temporary Worker migrants, Certificates of Sponsorship and sponsorship requirements.                   | <a href="https://www.gov.uk/government/publications/workers-and-temporary-workers-guidance-for-sponsors-part-2-sponsor-a-worker">https://www.gov.uk/government/publications/workers-and-temporary-workers-guidance-for-sponsors-part-2-sponsor-a-worker</a>                                         |
| Sponsor a Skilled Worker      | Skilled Worker route-specific guidance, including route conditions and sponsor responsibilities.                                           | <a href="https://www.gov.uk/government/publications/sponsor-a-skilled-worker">https://www.gov.uk/government/publications/sponsor-a-skilled-worker</a>                                                                                                                                               |
| Sponsor compliance visits     | UKVI compliance visit guidance explains how record-keeping and reporting systems may be assessed.                                          | <a href="https://www.gov.uk/government/publications/points-based-system-sponsor-management/points-based-system-sponsor-compliance-visits-accessible">https://www.gov.uk/government/publications/points-based-system-sponsor-management/points-based-system-sponsor-compliance-visits-accessible</a> |

## 3. Required Premium Feature Outcome

- Premium subscribers can run a full UKVI sponsor compliance scan for the whole company.
- The scan checks organisation-level, worker-level, document-level, payroll-level, attendance-level and reporting-level compliance evidence.
- The system produces an overall readiness/compliance score, category scores, red flags, risk level and action plan.

- The user can preview the full report in-app before downloading it.
- The user can optionally download PDF and Word versions of the report.
- Where the company lags in compliance, the alerts system must flag issues and route them to the UKVI dashboard, employee profile and audit log.
- The feature must be gated behind subscription/plan access and not available to free/basic plans except as a locked preview or upgrade prompt.
- The system must keep a scan history so the company can evidence improvement over time.

## 4. Premium Access and Subscription Gating

| Requirement         | Production-ready behaviour                                                                                                     |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------|
| Plan control        | Only companies on the Premium/Enterprise/UKVI Compliance plan can run full scans and download reports.                         |
| Locked preview      | Non-subscribed users may see a limited dashboard card showing the value of the feature, but cannot run or download full scans. |
| Backend enforcement | Access must be enforced on the API/server side, not just hidden in the frontend.                                               |
| Usage limits        | Configurable limits such as monthly scans, per-company scan count or unlimited Enterprise access.                              |
| Billing integration | Connect with the existing subscription model or billing provider. Store entitlement in tenant/company subscription records.    |
| Audit log           | Log subscription-gated scan attempts, successful scans and downloads.                                                          |

## 5. Pre-Implementation Codebase Audit - Must Happen First

Before writing new code, the developer/Codex must inspect the current RealtouchHR implementation and answer the checklist below. This avoids duplication and helps upgrade existing components instead of rebuilding blindly.

| Area to check               | Confirm if exists                                                                                 | What to do if missing or incomplete                               |
|-----------------------------|---------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|
| UKVI Compliance dashboard   | Overview/Reporting/Alerts tabs; Check Alerts button; Refresh button                               | Implement cards, scan trigger, alert summaries and reporting tab. |
| Employee UKVI data model    | Sponsored worker fields, visa expiry, CoS fields, SOC code, salary/hours, work location, RTW data | Extend employee schema and migration safely.                      |
| Document management         | Document categories, expiry dates, worker evidence, company documents, download permissions       | Add categories and expiry/reminder metadata.                      |
| Compliance checklist engine | Reusable rules engine with configurable rules, weights and severity                               | Create rule engine instead of hard-coded UI-only checks.          |
| Alert system                | Alerts model, severity, status, assigned user, due date, source object, resolution workflow       | Build central alert workflow and integrate with UKVI.             |
| Report generation           | HTML preview, PDF/DOCX                                                                            | Implement preview and export                                      |

|                          |                                                                  |                                                       |
|--------------------------|------------------------------------------------------------------|-------------------------------------------------------|
|                          | generation, stored report snapshots                              | pipeline.                                             |
| Subscription/permissions | Plan entitlements, role-based permissions, feature flags         | Add server-side gating and user feedback.             |
| Audit logging            | Records scan runs, settings changes, documents, report downloads | Log every critical action.                            |
| AI Copilot integration   | Ability to summarise gaps and recommend next actions             | Add optional analysis layer after deterministic scan. |

## 6. Compliance Scan Categories

| Category                          | What the scan must check                                                                                                                                                           | Example output                                                       |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| Organisation licence readiness    | Sponsor licence status fields, key personnel, AO/KC/Level 1 user records, trading address, Companies House details where stored, PAYE/accounting evidence and internal HR systems. | Organisation profile 82%; missing Level 1 backup user evidence.      |
| Right to work records             | RTW check date, check method, evidence upload, expiry/follow-up date, checked by, repeat checks for time-limited permission.                                                       | 2 workers need follow-up checks within 30 days.                      |
| Sponsored worker records          | CoS number, SOC code, job title, salary, hours, work location, visa start/expiry, sponsor start/end, assigned CoS evidence.                                                        | 1 sponsored worker has no uploaded CoS evidence.                     |
| Job/payroll alignment             | Compare CoS salary/hours/job title/work location with employee profile and payroll data.                                                                                           | Salary mismatch: CoS says £38,700, payroll says £36,000.             |
| Attendance and absence monitoring | Shift records, timesheets, authorised/unauthorised absences, long absence patterns and no-show reporting triggers.                                                                 | Unauthorised absence not resolved for sponsored worker.              |
| Reporting duties triggers         | Detect worker failed to start, employment ended early, job/salary/location changes, prolonged unpaid absence, change to organisation details.                                      | Potential SMS report required: job location changed.                 |
| Document evidence pack            | Contracts, job descriptions, RTW, visa/eVisa, CoS, payslips, recruitment evidence if applicable, qualifications, contact details.                                                  | Missing signed contract for sponsored worker.                        |
| Policies and HR systems           | Absence policy, RTW procedure, sponsorship procedure, document retention, reporting escalation and responsible owners.                                                             | Policy evidence incomplete: no sponsor reporting procedure uploaded. |
| Audit and governance              | Who checked records, when changes were made, report history, resolved alerts and remediation notes.                                                                                | Audit trail ready; 3 unresolved high-risk alerts.                    |

## 7. Risk Scoring Model

| Score band | Label | Required UI treatment |
|------------|-------|-----------------------|
|------------|-------|-----------------------|

Prepared for RealtouchHR development - not legal advice - validate against current GOV.UK sponsor guidance before release.

|         |                               |                                                                                                                 |
|---------|-------------------------------|-----------------------------------------------------------------------------------------------------------------|
| 90-100% | Compliant / Ready             | Green badge; downloadable report available.                                                                     |
| 75-89%  | Mostly compliant - minor gaps | Amber/green badge; list gaps and due dates.                                                                     |
| 50-74%  | Moderate risk                 | Amber badge; action plan required before saying compliant.                                                      |
| 25-49%  | High risk                     | Red badge; block “fully compliant” language and show urgent action plan.                                        |
| 0-24%   | Critical risk                 | Dark red badge; recommend immediate review and prevent clean report download unless clearly marked as critical. |

Scoring must use weighted deterministic rules. AI can assist with summaries, but the core pass/fail and scoring logic must be explainable, auditable and reproducible.

## 8. Alerts System Requirements

- Every failed rule that requires action must create or update an alert.
- Alerts must have severity: Info, Low, Medium, High, Critical.
- Alerts must have status: Open, In Progress, Resolved, Dismissed, False Positive.
- Alerts must be linked to source object: company, employee, document, payroll record, absence record, sponsorship record or scan report.
- Alerts must support due dates, assignment to a user, notes, attachments and resolution evidence.
- Duplicate alerts must be merged or updated rather than creating repeated noise on every scan.
- The UKVI Compliance dashboard must show active alerts by severity and due date.
- The employee profile must show worker-specific UKVI alerts.
- Resolved alerts must remain in the audit trail and scan history.

## 9. Report Preview and Download Requirements

| Report section            | Required content                                                                                       |
|---------------------------|--------------------------------------------------------------------------------------------------------|
| Cover/summary             | Company name, scan date/time, scan ID, risk score, risk level, premium feature disclaimer.             |
| Executive summary         | Plain-English overview of compliance position and top risks.                                           |
| Category scores           | Organisation, RTW, sponsored workers, payroll alignment, documents, reporting, attendance, governance. |
| Red flags                 | High and critical gaps with why they matter and required action.                                       |
| Worker-by-worker analysis | Each sponsored worker with readiness status, missing evidence and upcoming deadlines.                  |
| Evidence pack checklist   | Required and uploaded documents, missing documents, expiry dates.                                      |
| Reporting triggers        | Potential SMS report triggers detected and whether resolved.                                           |
| Alerts summary            | Open alerts by severity, owner and due date.                                                           |
| Action plan               | Prioritised actions: immediate, 7 days, 30 days, ongoing.                                              |

|                        |                                                                              |
|------------------------|------------------------------------------------------------------------------|
| Audit trail            | Scan run details, rules version, user who ran scan, report download history. |
| Sources and disclaimer | Official GOV.UK source references and clear non-legal-advice statement.      |

## 10. Suggested Database Models / Tables

### ukvi\_compliance\_rules

- id, code, title, category, description, severity, weight, active, guidance\_url, guidance\_version, created\_at, updated\_at

### ukvi\_compliance\_scans

- id, company\_id, run\_by\_user\_id, status, started\_at, completed\_at, overall\_score, risk\_level, rules\_version, summary\_json, report\_snapshot\_json

### ukvi\_compliance\_scan\_results

- id, scan\_id, rule\_id, entity\_type, entity\_id, passed, score, severity, finding, recommendation, evidence\_refs\_json

### ukvi\_compliance\_alerts

- id, company\_id, source\_type, source\_id, rule\_id, severity, title, description, status, due\_date, assigned\_to\_user\_id, resolution\_note, resolved\_at

### ukvi\_report\_exports

- id, scan\_id, company\_id, exported\_by\_user\_id, format, file\_url, created\_at, download\_count

### ukvi\_subscription\_entitlements

- id, company\_id, plan\_name, feature\_key, enabled, monthly\_scan\_limit, scans\_used, current\_period\_start, current\_period\_end

## 11. API / Backend Requirements

```
GET /api/ukvi/compliance/status
POST /api/ukvi/compliance/scans/run
GET /api/ukvi/compliance/scans/:scanId
GET /api/ukvi/compliance/scans/:scanId/preview
POST /api/ukvi/compliance/scans/:scanId/export?format=pdf
POST /api/ukvi/compliance/scans/:scanId/export?format=docx
GET /api/ukvi/compliance/alerts
PATCH /api/ukvi/compliance/alerts/:alertId
POST /api/ukvi/compliance/alerts/:alertId/resolve
GET /api/ukvi/compliance/rules
PATCH /api/admin/ukvi/compliance/rules/:ruleId
GET /api/billing/entitlements/ukvi-compliance-scan
```

- All premium endpoints must validate subscription entitlement server-side.
- All endpoints must validate tenant/company ownership and role permissions.
- Long scans should run as background jobs if the dataset is large.
- Reports must be generated from immutable scan snapshots so downloaded reports match the preview.

## 12. Frontend User Experience

| Screen / component           | Required behaviour                                                                                                                       |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| UKVI Overview tab            | Show score cards, last scan, open alerts, sponsored worker count, expiring visas, missing documents and Run Full Compliance Scan button. |
| Reporting tab                | Show scan history, report previews, PDF/DOCX downloads, export status and audit details.                                                 |
| Alerts tab                   | Show all UKVI compliance alerts with severity, owner, due date, status, linked employee/document and resolve action.                     |
| Run scan modal               | Explain what will be checked, confirm premium entitlement, allow scan notes, then start scan.                                            |
| Report preview               | Display full report inside app with printable layout and export buttons.                                                                 |
| Locked premium state         | For non-subscribers, show locked premium card and upgrade CTA without exposing report generation.                                        |
| Employee profile integration | Show UKVI scan status and worker-specific alerts inside employee profiles.                                                               |

## 13. Production Readiness and Testing Criteria

| Test area        | Acceptance criteria                                                                                                   |
|------------------|-----------------------------------------------------------------------------------------------------------------------|
| Feature audit    | Codex/developer outputs a list of existing, partial and missing features before implementation.                       |
| Premium gating   | Unauthorised/free plans cannot run scans or download reports from UI or API.                                          |
| Scan engine      | Rules run consistently and return expected scores for seeded compliant and non-compliant companies.                   |
| Alert generation | Failed rules create alerts; repeated scans update existing alerts without duplicates.                                 |
| Report preview   | Preview displays all sections accurately from the scan snapshot.                                                      |
| PDF/DOCX export  | Reports download correctly, retain layout, and include scan ID/source references.                                     |
| Audit logs       | Scan run, report download, alert resolution and settings changes are logged.                                          |
| Data security    | Sensitive worker/visa documents are permission-controlled and not exposed through report links to unauthorised users. |
| Performance      | Scan runs within acceptable time for realistic company sizes or queues safely in background.                          |
| Error handling   | Clear user messages for missing data, failed export, expired subscription and scan errors.                            |

## 14. Comprehensive Codex / Developer Prompt

Copy and paste the prompt below directly into Codex or give it to your developer.

You are working on the RealtouchHR application. The current UKVI Compliance module shows tabs for Overview, Reporting and Alerts, but I need you to first audit the existing codebase and confirm whether the application already supports a comprehensive premium UKVI Compliance Scan feature. Do not immediately rebuild. First inspect the existing

frontend, backend, database models, services, API routes, subscription/permission logic, alert system, report generation, employee UKVI fields, document models and audit logs.

#### Goal:

Build or complete a production-ready premium UKVI Compliance Scan feature that can scan the whole company and determine whether the user's organisation is meeting the required sponsor compliance evidence and checklist standards. The feature must support previewing and optionally downloading the report, while compliance gaps must be flagged through the alerts system.

#### Phase 1 - Audit existing implementation:

1. Identify all existing UKVI Compliance frontend pages/components: Overview, Reporting, Alerts, scan buttons, alert buttons and report UI.
2. Identify all existing backend routes/services related to UKVI compliance, sponsor compliance, employee compliance, RTW, documents, payroll alignment and audit logs.
3. Identify all existing database tables/models/fields that hold:
  - company sponsor licence data
  - key personnel details
  - sponsored worker information
  - CoS details
  - SOC code
  - job title
  - salary and weekly hours
  - work location
  - visa start/expiry date
  - right-to-work check evidence
  - document uploads and expiry dates
  - attendance/absence records
  - payroll records
  - compliance alerts
  - report exports
  - audit logs
4. Identify any existing subscription/plan/feature-gating logic.
5. Produce an implementation audit summary with three sections:
  - Existing and usable
  - Partially existing but needs enhancement
  - Missing and must be built

#### Phase 2 - Implement premium subscription gating:

1. Create or connect a feature entitlement called `UKVI_COMPLIANCE_SCAN_PREMIUM`.
2. Only subscribed companies/plans should run full scans and export reports.
3. Enforce this in the backend/API as well as the frontend.
4. Non-subscribed users may see a locked premium card or upgrade CTA, but cannot run scans or download reports.
5. Log attempted restricted access in the audit log.

#### Phase 3 - Build the deterministic compliance rules engine:

Create a reusable UKVI compliance rules engine. Do not hard-code checks only in React/UI. The engine must evaluate rules by category, severity and weight, and return pass/fail, score, finding, recommendation and evidence references.

#### Required scan categories:

1. Organisation-level sponsor readiness:
  - sponsor licence status fields
  - company details
  - key personnel: Authorising Officer, Key Contact, Level 1 user
  - trading address and work locations
  - HR/compliance policies
  - sponsor management responsibility evidence
2. Right to Work records:
  - RTW status
  - check type

- check date
- checked by
- document/share code evidence
- expiry/follow-up check date for time-limited permission

### 3. Sponsored worker records:

- sponsored worker flag
- CoS number
- SOC code
- CoS job title
- CoS salary
- CoS weekly hours
- CoS work location
- visa start and expiry dates
- sponsorship start and end dates

### 4. Payroll and job alignment:

- compare CoS salary with payroll salary
- compare CoS weekly hours with employee/payroll hours
- compare CoS job title with employee current job title
- compare CoS work location with actual work location

### 5. Attendance and absence monitoring:

- unauthorised absence
- missed shifts/no-shows
- long unpaid absence indicators
- absence evidence and resolution notes

### 6. Reporting duty triggers:

- worker did not start
- employment ended early
- job title/duties changed materially
- salary changed materially
- work location changed
- prolonged unauthorised absence
- company/key personnel details changed

### 7. Evidence pack/document checklist:

- contract
- job description
- right-to-work evidence
- visa/eVisa evidence
- CoS evidence
- payslips where applicable
- recruitment evidence where applicable
- qualifications/professional registration where applicable
- current contact details

### 8. Governance and audit trail:

- last scan date
- alert status
- audit evidence
- user who checked/approved records
- date/time of compliance actions

### Phase 4 - Build scoring:

1. Overall company compliance score from 0-100%.

2. Category scores from 0-100%.

3. Risk labels:

- 90-100: Compliant / Ready
- 75-89: Mostly compliant - minor gaps
- 50-74: Moderate risk
- 25-49: High risk
- 0-24: Critical risk

4. High and critical findings must be prominently displayed.

5. The system must not call the company “fully compliant” where high or critical gaps exist.

Phase 5 - Alerts system integration:

1. Every failed rule that needs action must create or update an alert.
2. Alerts must include severity, title, description, source object, linked employee/document/company record, due date, status, assigned user and recommendation.
3. Prevent duplicate alerts on repeated scans by updating existing open alerts for the same rule/entity.
4. Alert statuses: Open, In Progress, Resolved, Dismissed, False Positive.
5. Resolved alerts must remain in audit history.
6. The UKVI Compliance Alerts tab must show alert filters by severity, employee, due date and status.
7. The “Check Alerts” button should run the alert refresh logic or open current unresolved alerts.

Phase 6 - Report preview and downloads:

1. Add a Reporting tab that shows scan history and report actions.
2. After a scan, allow the user to preview the full report in-app.
3. The report must include:
  - cover/summary
  - scan ID
  - company name
  - scan date/time
  - overall score and risk level
  - category scores
  - executive summary
  - high/critical red flags
  - worker-by-worker analysis
  - evidence pack checklist
  - missing documents
  - reporting duty trigger analysis
  - alert summary
  - action plan
  - audit trail summary
  - official GOV.UK source/reference section
  - non-legal-advice disclaimer
4. Add export to PDF and DOCX/Word where the app stack supports it.
5. Reports must be generated from immutable scan snapshots so downloaded reports match the preview even if data changes later.
6. Store report export records and download activity.

Phase 7 - Data model and migrations:

Add or update tables/models as needed, such as:

- ukvi\_compliance\_rules
- ukvi\_compliance\_scans
- ukvi\_compliance\_scan\_results
- ukvi\_compliance\_alerts
- ukvi\_report\_exports
- ukvi\_subscription\_entitlements

Extend employee/worker/document/payroll schemas only where required and use safe migrations.

Phase 8 - UI/UX requirements:

Match existing RealtouchHR style: white background, purple gradient buttons, card-based dashboard, clean tabs, status badges and clear warning banners.

Add:

- Full Compliance Scan button
- Last scan summary card
- Overall score card
- Category score cards
- Open alerts card
- Critical findings card
- Report preview panel

- Download PDF/DOCX buttons
- Locked premium state for non-subscribers
- Clear warning that the tool assists with compliance record-keeping and does not constitute legal advice.

#### Phase 9 - Security and permissions:

1. Only authorised admin/compliance roles can run scans and download full reports.
2. Sensitive data such as visa documents, right-to-work evidence, salary, NI number, bank/payroll data and private employee records must not be exposed to unauthorised users.
3. Report files must use secure access-controlled URLs or storage.
4. All scan runs, exports, alert changes and sensitive data access must be audit logged.

#### Phase 10 - Testing and production readiness:

Create tests covering:

1. subscribed user can run scan
2. unsubscribed user cannot run scan even by API call
3. fully compliant seeded company scores correctly
4. missing RTW evidence creates alert
5. visa expiring soon creates alert
6. CoS salary and payroll mismatch creates alert
7. work location mismatch creates alert
8. unauthorised absence creates alert
9. repeated scans do not duplicate alerts
10. report preview matches export snapshot
11. PDF/DOCX export works
12. audit logs are created
13. role-based access is enforced
14. scan failure shows clear error

#### Deliverables required from you:

1. Audit report of existing features and gaps.
2. Implementation plan for missing pieces.
3. Code implementation.
4. Database migrations.
5. Tests.
6. Seed/demo data for compliant and non-compliant scenarios.
7. Clear deployment notes.
8. Confirmation that the feature is production-ready.

#### Important:

This feature must be deterministic and auditable. AI may be used only to summarise findings or suggest action wording, not as the sole compliance decision engine. The rules must be explainable and traceable to source guidance. Always include a disclaimer that the tool supports compliance record-keeping but does not provide legal advice.

## 15. Final Definition of Done

- Developer has completed the audit and confirmed existing/missing features.
- Premium subscription gating works on frontend and backend.
- Full compliance scan runs successfully on sample data.
- Alerts are generated for missing/non-compliant items.
- The report can be previewed in-app.
- The report can be downloaded as PDF and DOCX/Word.
- Reports include scan ID, score, red flags, action plan, evidence checklist, sources and disclaimer.
- Audit log captures scan, alert and report actions.

Prepared for RealtouchHR development - not legal advice - validate against current GOV.UK sponsor guidance before release.

- Tests pass, including subscribed/unsubscribed access, rule results, alerts and export generation.
- The feature is safe to deploy to production behind the premium subscription plan.

## 16. Suggested In-App Disclaimer

This dashboard assists with UKVI sponsor compliance record-keeping and internal readiness checks. It does not constitute legal advice. Sponsor compliance remains the employer's legal responsibility. Users should review current GOV.UK sponsor guidance and seek professional legal advice where needed.
